Se trata de un libro que contempla el currículum oficial en su totalidad. Útil para que el alumnado de Bachillerato, en especial el de la modalidad a distancia, asimile los principales conceptos de la Biología y su articulación en leyes, teorías y modelos, para que conozca los procedimientos y destrezas de la actividad científica, y tenga un marco de referencia ético en el trabajo científico. Todo ello permitirá a cualquier usuario apreciar y valorar de manera significativa cuantos elementos participan en el conocimiento e interpretación de la Naturaleza. La obra puede ser considerada, en buena medida, como una prolongación de la Biología estudiada en Primero de Bachillerato. Pero en tanto que el enfoque dado a la Biología, en la materia de Biología y Geología, de Primero, se centra en el conocimiento de los seres vivos completos de qué manera se nutren, mediante qué

mecanismos se relacionan, cómo se reproducen en este material para Segundo de Bachillerato, el acento se pone en la comprensión de los niveles celular, subcelular y molecular, interpretando las características de los fenómenos biológicos en virtud de las sustancias que los componen.
